

Balance of payments – France • May 2021

A slight current account deterioration

In May, the current account deficit stood at 2.3 billion euros, after 2.0 billion in April (working day and seasonally adjusted). The services surplus stood at 1.6 billion euros, down by 0.8 billion euros. The goods balance improved somewhat thanks to the 0.2 billion euros reduction in the deficit on goods excluding energy.

In the financial account (non-seasonally adjusted), capital inflows exceeded outflows by 5.5 billion euros. The 28.6 billion euros net inflows of loans and deposits thus exceeded the net outflows in portfolio investments (16.4 billion euros) and direct investments (2.4 billion euros).

France's balance of payments

Methodological notes relating to pages 1 and 3

(1) Data on trade in goods are FOB-FOB values, which means without cost, insurance and freight. This expenditure is recorded in the services item. Exchanges of goods cover General merchandise published by the Directorate General of Customs and Excise (DGDDI) on one side, merchandising and methodological adjustments calculated by the Banque de France, on the other side. In order to ensure the comparability of French balance of payments with those of other countries and conformity with the international standards, the international standard for Balance of Payments statistics is released under the aegis of the International Monetary Fund. The key concept for the balance of payments is the concept of economic ownership which is consistent with the national accounts.

(2) Services other than travel (tourism and professional travels), transport services, professional and management consulting services, R&D and development and technical services, trade-related and other business services include manufacturing, maintenance and repair, construction, insurance and pension services, financial services, charges for the use of intellectual property, telecommunication, computer and information services, personal, cultural and recreational services and government goods and services.

(3) Income includes primary and secondary incomes. Primary income refers to the flows received by economic agents for their participation in the production process ("compensation of employees") or for the provision of financial assets ("investment income") or for the rental of natural resources ("rent"). Taxes and subsidies on products and production are also included in primary income. Secondary income records current transfers between residents and non-residents. A transfer is a transaction that involves the provision of a good, service, financial asset or another non-produced asset without receiving something of economic value in exchange.

(4) The "other investment" (loans and deposits) component of the financial account includes all transactions in financial assets and liabilities with non-residents that do not concern direct investment, portfolio investment, financial derivatives or reserve assets. In practice, this mainly concerns bank deposits and interbank lending, as well as loans and deposits made by insurance companies and all kinds of investment companies and funds.
